Version-11.5.0

APDL version 11.5.0 is a major update to the CFR Part 117 app for airline pilots. The following revisions outline the major updates in this release:

New Features

• Payroll View - Expanded information to include estimated Net Pay, Retirement Contributions, and Taxes to Pay Period and YTD Payroll summaries.
• Pay Estimator - Accessed by tapping 'Details, Taxes, Retirement, and What If' from the expanded payroll information section on the Payroll view.
• What If Pay Calculator - Accessed from the What If menu or the What If icon on Payroll Navigation Bar

Quality Improvements (Fixes)

• Share APDL with your friends and crewmembers with ease. A new share row in the main menu to display a QR Code or AirDrop a link to APDL in the App Store by tapping the share button in the upper right.
• Updated pay period UI date picker.
• Missing Legality Detail Report resolved.
• Calendar and Schedule Views - Add Trip, Import Trip, Delete Trip actions update underlying view immediately.
• 'New Leg' action on Calendar and Schedule views does not pre-fill destination in Leg Editor. This is by design, pervious version filled in the domicile.
• 'Delete Leg' action reliably removes trip.
• Commute To/From's Dept, Dest, and Airline would show blank after searching for flights. This UI issue was resolved.
• Validated Augmented Operations Multi Crew FDP Limit and Cumulative Limits in Projected Mode.
• Improved calendar note linking for FlightAware flight tracking
• Fixed an issue with Schedule Importer settings for time zone and filter selection
• Viewing Settings > Notifications will prompt for notification permissions if the device was reset and notifications need to be reactivated
• Updated airport database for KLAS name change

We appreciate your feedback, suggestions, and App Store reviews. We hope you enjoy the amazing features APDL brings airline pilots with the only true and comprehensive CFR Part 117 app available by airline pilots for airline pilots.
