

Version 8.1

Version 8.1 to Logbook Pro for iPhone and iPad devices running iOS 13 or later adds the following enhancements over our recent version 8.0 major release:

- Setting to show/hide endorsements
- New feature to allow full screen views. Setting "Show Full Screen" allows you to turn this on or off. Swiping up in an area will hide the top navigation bar, swiping down shows it again. This allows more screen space to view your data.
- Endorsements are now synced to the cloud and will be available soon to view and print from your NC Software cloud account
- Fixed an issue with the flight date when schedule importing flights
- Auto night no longer requires an Internet connection and is done entirely on device
- Data list areas now have a Search bar at the top for quick search and filtering of data
- Various other enhancements to further improve your flight logbook experience

Please share your support with an app review and spreading the word to tell your fellow pilots about the major update to Logbook Pro on iPhone and iPad devices.

Version 8.1.1 to 8.1.6 are minor updates for enhancements and bug fixes.
