Crosscheck

Overview

Never miss a flight entry again! Crosscheck continuously monitors your entries and notifies you of any entries missing required data. This keeps your logbook accurate and up to date.

Entries needing attention will be listed along with the type of data missing from that entry.

Tap on any entry to go to the Leg View for that entry and update the necessary data.

> ⚠️ In order to increase speed, Crosscheck only looks back 1 year from the current date. Any missing flight information greater than 1 year old will not be detected by Crosscheck.
