

Version 15.5

APDL 15.5 is now available on the Apple App Store. Update or install today, new users enjoy 90 DAYS FREE by just installing and using the app.

NEW FEATURES

- Live Activities & Dynamic Island: Rebuilt with countdown timers, real-time gates, hotel and rest info, and FAA airport delays and ground stops with color-coded severity
- Next Flight Widget: Long-press the Home Screen > Edit > Add Widget > APDL. Tap the widget to open your current trip
- Widgets and Live Activities now open directly to Trip View
- Enhanced Airport Weather: D-ATIS, METAR, and TAF
- Flight Crew View import in Schedule Importer
- Safari Share Extension: Highlight a trip in Safari, tap Share, then tap APDL to open Schedule Importer
- Flight Search: Tap a result to view flight options in FlightAware
- Custom Reserve Availability Period (RAP) time entry
- Trip View Report: Choose Trip Sheet or Legality Detail
- Updated Trip, Legality, Settings, and Résumé reports
- Pay Period Charts now include trip and cumulative totals

IMPROVEMENTS

- APDL stays current when you return to the app
- Alerts now show upcoming notifications without tapping refresh
- Improved flight route maps and error handling
- Paste & Process for AA bidline imports now asks for the trip start date
- Switching a leg to a reserve legality type now prompts you to add a RAP first
- Tapping Estimated Out on a new leg now explains the leg must be saved first
- Added safeguards for reserve legality calculations when RAP data is missing
- Airport database updates (PBI/DJT, MMSM/NLU)

FIXES

- Schedule importer and Paste & Process completion issues, including an empty success screen

We welcome your updated App Store review after checking out this amazing release! Thank you for being our customer and helping to spread the word to let others know of this amazing tool that is a must have for all airline pilots.
