Version 7.0.8

Version 7.0.8 brings many great enhancements and fixes based on outstanding customer feedback and our continued build out of APDL which is in its infancy of what's to come. One of the major new features is in the Legality Status and What If screens, a new "book" button on the upper right will show you the computations APDL is using and the results. This is great for several reasons; to give you the background of the computations making up your current legality equation and also so you can share or export the information for your reference or to send to someone else such as your scheduler. Take for example you are running various What If computations and you want to capture each scenario and refer to them later. You can now do this with the share feature once in the PDF review. You can also pinch to zoom in and view the details such as on the iPhone where the screen is smaller.

Release Notes - APDL iOS - Version 7.0.8

* [AI-1628] - Bug with Payroll Type and Cancel Button
* [AI-1909] - Text shifted off screen in resume areas
* [AI-1947] - Autofill still enters times on a Return to Gate leg
